Full-stack engineer, strongest in Ruby. Comfortable working across Python, TypeScript, and Java. Scales systems, modernizes legacy code, and ships clean architecture with real test coverage.

Technical Skills

Backend:	Ruby (Rails, RSpec), Java (Dropwizard, Dagger, JUnit)
APIs:	GraphQL, REST
Fullstack JS:	TypeScript, React, Next.js, Node.js, Express, Jest
DevOps & Cloud:	Terraform, Docker, Kubernetes, Argo CD, Jenkins, AWS, Azure
Databases & Messaging:	PostgreSQL, MySQL, MongoDB, Redis, Kafka

Professional Experience

Software Engineer – New Relic | Oct 2021 – Present

- Designed and delivered a GraphQL API serving 6000+ daily requests for a major enterprise customer
- Modernized legacy Rails 3 monolith by refactoring into Rails 7 service-oriented architecture, eliminating 10,000+ lines of technical debt and enabling faster feature development
- Enabled onboarding of larger customers by scaling Java-based telemetry platform's metric data ingest to support 2.5 GB/min throughput using striped architecture
- Raised automated test coverage to 95%+ across Ruby and Java services, maintaining sub-5-minute MTTA through comprehensive observability, dashboards, and alerting
- Mentored 2 junior engineers while delivering a CLI tool that generated 2 new Rails GraphQL APIs
- Used AI tools (Claude, Gemini) to automate code review, improving team delivery speed by 20%

Additional Experience

JavaScript TA – Grand Circus – Coached 20+ students via code reviews and tutoring. Co-developed a full-stack TypeScript/React/Node/MongoDB curriculum for two 6-month bootcamps

Python Instructor – Treehouse – Produced 3 courses (8+ hrs): data structures, analysis, and visualization

Projects

Lyrical Analysis | Python, Flask, PostgreSQL, Celery, Redis | [Live Demo](#) | [GitHub](#)

Natural Language Processing app discovering hidden themes in album lyrics; Multi-source lyrics API with fallback chain for cloud deployment; Async pipeline for 30-60s analyses

LearnForge Learning Management System | Rails, PostgreSQL, Hotwire | [Live Demo](#) | [GitHub](#)

Full-stack LMS: course authoring, enrollment, progress tracking; Real-time UI with Turbo Streams
