Technical Skills

Backend: Ruby (Rails, RSpec), Java (Dropwizard, Dagger, JUnit)
Fullstack JS: TypeScript, React, Next.js, Node.js, Express, Jest
DevOps & Cloud: Terraform, Docker, Kubernetes, Argo CD, Jenkins, AWS, Azure
Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka

Professional Experience

Software Engineer – New Relic | Oct 2021 – Present

- Delivered a GraphQL API handling 6,000+ daily requests for a key enterprise customer
- Refactored Rails 3 monolith into Rails 7 service-oriented architecture, cutting 10K+ lines of debt
- Scaled Java telemetry platform's metric data pipeline with striping architecture to support infinite ingest, unlocking larger customer onboarding
- Raised test coverage to 95%+ across Ruby and Java services; built observability and alerting
- Mentored 2 junior engineers while shipping a CLI tool to scaffold Rails GraphQL APIs
- Integrated AI tools (Claude, Gemini) into code generation and review loop, improving velocity by 20%

Additional Experience & Projects

JavaScript TA | Grand Circus | Mentored 20+ bootcamp students via live code reviews and tutoring, helping them build portfolio projects; Co-taught full-stack TypeScript/MERN across two 6-month cohorts

Python Instructor | Treehouse | Produced 3 Python courses (8+ hours) on data structures, analysis, and visualization; Wrote scripts, designed hands-on projects, and delivered screencasts for self-paced learners

CyberStudy Scheduler | Personal study platform for college coursework | [Try Demo](#) | [GitHub](#)

- API-first architecture whose primary consumer is an autonomous AI agent; clean data contract separating note content (Obsidian) from study performance (API)
- Agent generates miss-rate-weighted quizzes on a cron schedule, grades Socratic teach-back sessions, and automatically writes all results to the platform through the API
- SM-2 spaced repetition with review forecasting, interleaved practice queue, and daily briefing engine
- TypeScript, Next.js, Prisma, PostgreSQL, dual-mode auth (JWT + NextAuth sessions), Swagger docs

Lyrical Analysis | Natural Language Processing app analyzing album lyrics | [GitHub](#)

- Resilient lyrics pipeline with circuit breakers and multi-source fallback, async task processing to surface themes, sentiment, and emotions across 8 categories
- Python, Flask, PostgreSQL, Celery, Redis
